

Senior .Net Developer

Modern Climate is looking for a talented Senior Developer who can truly make a strong impression on the agency and its technical creativity. Our work spans a unique blend of brand, marketing and advertising, and interactive for both B2B and consumer audiences not typically found in other agencies.

Role

The Senior Developer will bring strong architectural and programming capabilities that can be leveraged to deliver dynamic, interactive experiences that set our agency apart, drive growth and exceed client expectations. You will work closely with other developers, designers and account managers to realize each project deliverable in a timely manner. This position will report directly to the Technical Director.

Responsibilities

- Understand technical and functional requirements and how to translate requirements into an effective design.
- Assist in physical and logical database design.
- Create prototypes for client engagements.
- Design, code, and test technical solutions.
- Identify system deficiencies and recommend solutions.
- As a team player, assist in the successful completion of development deadlines and schedules
- Possess an ability to multitask and balance multiple concurrent projects to achieve a successful delivery
- Understand the necessity of and contribute to coding standards.
- Develop internal and external meeting objectives and agendas.
- Accurately prepare written business correspondence that is coherent, grammatically correct, effective, and professional.
- Understand client server and internet systems architectures.
- Proactively communicate issues/events that may impact delivery and/or client expectations
- Comfortable participating in and driving collaborative discussions
- Demonstrate and promote active listening/communication with team members – actively and appropriately contribute to conversations.
- Uphold company quality and standards.

Senior .Net Developer (continued)

Qualifications

- Bachelor degree in Computer Science and minimum of 5 years experience
- Demonstrate proficiency in the C#.NET language
- Proven experience building ASP.NET web applications
- Possess a solid understanding of object-oriented design and development concepts
- Possess a solid understanding of design patterns, including MVC
- Possess demonstrated work experience with at least one relational database – Microsoft SQL Server preferred
- Possess a solid understanding of HTML, CSS, XML, and XSL stylesheets
- Have an understanding of Adobe Flash, Flex and ActionScript 3
- Have an understanding of WPF and Silverlight
- Experience with a content management system (CMS) is highly desirable
- Possess an understanding of the marketing and advertising industry, experience desired

Physical Requirements

- Ability to handle and be trusted with confidential and/or sensitive information.
- Ability to work in a fast-paced environment.
- Ability to be flexible and to handle multiple projects in an organized, timely manner.
- Ability to problem solve, work under pressure, and to effectively manage stress.
- Ability to work independently.

Compensation

Modern Climate offers competitive salaries, exceptional benefits including 401k, personal time off, flexible hours, health/dental insurance, life insurance, and a comfortable working environment in downtown Minneapolis.

Please submit resume, work samples/URLs, salary expectations and any questions to careers@modernclimate.com, with the subject line "Senior Developer".

Note: There is no relocation assistance available at this time, local candidates only please.
